exchange of experience

WHERE? online

WHEN? 12:00h-15:00h (CET)

Hydrogen in Shipping

Hydrogen is on the one hand a cargo and on the other hand an alternative fuel that can contribute to the reduction of emissions and immissions in freight mobility. Waterway transport and its infrastructure as core topics play an essential role in creating sustainable and climate-neutral logistics chains.

In the course of the project H₂meetsH₂O a lot of knowledge was pooled. In this exchange of experiments, not only the observation of this project but also the experiments from national and international stakeholder will be present.

The presentations are held in English.
